

Dear Holohire,

I am currently studying Computer Science at UCL (Denmark), where I am developing strong skills in data handling, databases, and programming through technologies such as C#, .NET, SQL, and React. I am now seeking a 3-month remote internship starting January 2026, and this Data Analyst role immediately caught my attention.

I am passionate about working with data to create insights and value, and I see this internship as an opportunity to expand my understanding of data analysis while contributing with my technical background. Recently, I built a booking system for a travel agency, where I worked with database integration, API design, and reporting — an experience that taught me how to extract and structure meaningful data from complex systems.

Because I study online and have a background as a professional basketball player, I am highly self-driven, disciplined, and used to working independently while staying connected with a team. I enjoy learning, problem-solving, and seeing data turned into actionable results.

I would be excited to contribute to your data projects and gain hands-on experience while learning from your team of professionals.

Thank you for considering my application — I look forward to the opportunity to discuss how I can contribute to your team.

Best regards,

Sami Eleraky
